Website Vulnerability Scanner Report

✔ http://87.237.52.246:8080

Summary

Overall risk level:

High

Risk ratings:

High:	1
Medium:	3
Low:	3
Info:	47

Scan information:

Start time:	2022-12-13 00:33:34 UTC+02
Finish time:	2022-12-13 00:57:05 UTC+02
Scan duration:	23 min, 31 sec
Tests performed:	54/54
Scan status:	Finished

Findings

Passwords are submitted unencrypted over the network CONFIRMED

URL	Evidence
http://87.237.52.246:8080/login	Password input detected over unsecure HTTP. Login form: <input id="password" name="password" placeholder="Geben Sie Ihr Passwort ein" required="" type="password"/>

Details

Risk description:

An attacker could intercept the communication between the web browser and the server and he could retrieve the clear-text authentication credentials.

Recommendation:

We recommend you to reconfigure the web server so it uses HTTPS - which encrypts the communication between the web browser and the server. This way, the attacker will not be able to obtain the clear-text passwords, even though he manages to intercept the network communication.

Classification:

CWE : CWE-523
OWASP Top 10 - 2013 : A6 - Sensitive Data Exposure
OWASP Top 10 - 2017 : A3 - Sensitive Data Exposure

Screenshot:

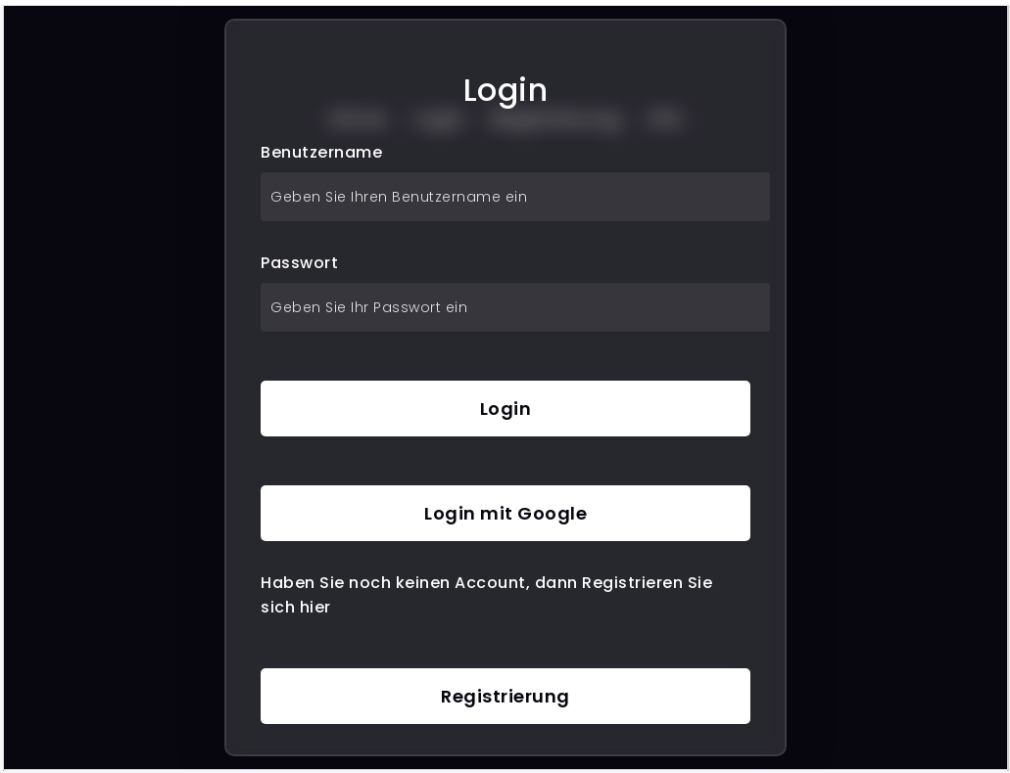

Figure 1. Password field found

Communication is not secure CONFIRMED

URL	Evidence
http://87.237.52.246:8080	Communication is made over unsecure, unencrypted HTTP.

Details

Risk description:
The communication between the web browser and the server is done using the HTTP protocol, which transmits data unencrypted over the network. Thus, an attacker who manages to intercept the communication at the network level is able to read and modify the data transmitted (including passwords, secret tokens, credit card information and other sensitive data).

Recommendation:
We recommend you to reconfigure the web server to use HTTPS - which encrypts the communication between the web browser and the server.

Classification:
CWE : CWE-311
OWASP Top 10 - 2013 : A6 - Sensitive Data Exposure
OWASP Top 10 - 2017 : A3 - Sensitive Data Exposure

Insecure cookie setting: missing Secure flag CONFIRMED

URL	Cookie Name	Evidence
http://87.237.52.246:8080/login	csrftoken	Set-Cookie: csrftoken=eQOYk38tAfyydlNqoCihZWso6fHLiVYj; expires=Mon, 11 Dec 2023 22:34:20 GMT; Max-Age=31449600; Path=/; SameSite=Lax

Details

Risk description:
Since the `Secure` flag is not set on the cookie, the browser will send it over an unencrypted channel (plain HTTP) if such a request is made. Thus, the risk exists that an attacker will intercept the clear-text communication between the browser and the server and he will

steal the cookie of the user. If this is a session cookie, the attacker could gain unauthorized access to the victim's web session.

Recommendation:
Whenever a cookie contains sensitive information or is a session token, then it should always be passed using an encrypted channel. Ensure that the secure flag is set for cookies containing such sensitive information.

References:
https://owasp.org/www-project-web-security-testing-guide/stable/4-Web_Application_Security_Testing/06-Session_Management_Testing/02-Testing_for_Cookies_Attributes.html

Classification:
CWE : CWE-614
OWASP Top 10 - 2013 : A5 - Security Misconfiguration
OWASP Top 10 - 2017 : A6 - Security Misconfiguration

Insecure cookie setting: missing HttpOnly flag CONFIRMED

URL	Cookie Name	Evidence
http://87.237.52.246:8080/login	csrftoken	Set-Cookie: csrftoken=eQOYk38tAfyydlNqoCihZWso6fHLiVYj; expires=Mon, 11 Dec 2023 22:34:20 GMT; Max-Age=31449600; Path=/; SameSite=Lax

Details

Risk description:
A cookie has been set without the `HttpOnly` flag, which means that it can be accessed by the JavaScript code running inside the web page. If an attacker manages to inject malicious JavaScript code on the page (e.g. by using an XSS attack) then the cookie will be accessible and it can be transmitted to another site. In case of a session cookie, this could lead to session hijacking.

Recommendation:
Ensure that the HttpOnly flag is set for all cookies.

References:
https://owasp.org/www-community/HttpOnly

Classification:
CWE : CWE-1004
OWASP Top 10 - 2013 : A5 - Security Misconfiguration
OWASP Top 10 - 2017 : A6 - Security Misconfiguration

Missing security header: X-XSS-Protection CONFIRMED

URL	Evidence
http://87.237.52.246:8080	Response headers do not include the HTTP X-XSS-Protection security header

Details

Risk description:
The `X-XSS-Protection` HTTP header instructs the browser to stop loading web pages when they detect reflected Cross-Site Scripting (XSS) attacks. Lack of this header exposes application users to XSS attacks in case the web application contains such vulnerability.

Recommendation:
We recommend setting the X-XSS-Protection header to `X-XSS-Protection: 1; mode=block` .

References:
https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/X-XSS-Protection

Classification:
CWE : CWE-693
OWASP Top 10 - 2013 : A5 - Security Misconfiguration
OWASP Top 10 - 2017 : A6 - Security Misconfiguration

Missing security header: Content-Security-Policy CONFIRMED

URL	Evidence
http://87.237.52.246:8080	Response headers do not include the HTTP Content-Security-Policy security header

Details

Risk description:
The Content-Security-Policy (CSP) header activates a protection mechanism implemented in web browsers which prevents exploitation of Cross-Site Scripting vulnerabilities (XSS). If the target application is vulnerable to XSS, lack of this header makes it easily exploitable by attackers.

Recommendation:
Configure the Content-Security-Header to be sent with each HTTP response in order to apply the specific policies needed by the application.

References:
https://cheatsheetseries.owasp.org/cheatsheets/Content_Security_Policy_Cheat_Sheet.html
https://developer.mozilla.org/en-US/docs/Web/HTTP/Headers/Content-Security-Policy

Classification:
CWE : CWE-693
OWASP Top 10 - 2013 : A5 - Security Misconfiguration
OWASP Top 10 - 2017 : A6 - Security Misconfiguration

Internal Server Error Found CONFIRMED

URL	Method	Parameters	Evidence
http://87.237.52.246:8080/shshare	GET		Response has an internal server error status code: 500

Details

Risk description:
The website does not handle or incorrectly handles an exceptional condition. An attacker may use the contents of error messages to help launch another, more focused attack. For example, an attempt to exploit a path traversal weakness (CWE-22) might yield the full pathname of the installed application.

Recommendation:
Ensure that error messages only contain minimal details that are useful to the intended audience, and nobody else. The messages need to strike the balance between being too cryptic and not being cryptic enough. They should not necessarily reveal the methods that were used to determine the error. Such detailed information can be used to refine the original attack to increase the chances of success. If errors must be tracked in some detail, capture them in log messages - but consider what could occur if the log messages can be viewed by attackers. Avoid recording highly sensitive information such as passwords in any form. Avoid inconsistent messaging that might accidentally tip off an attacker about internal state, such as whether a username is valid or not.

Classification:
CWE : CWE-209
OWASP Top 10 - 2013 : A5 - Security Misconfiguration
OWASP Top 10 - 2017 : A6 - Security Misconfiguration

Screenshot:

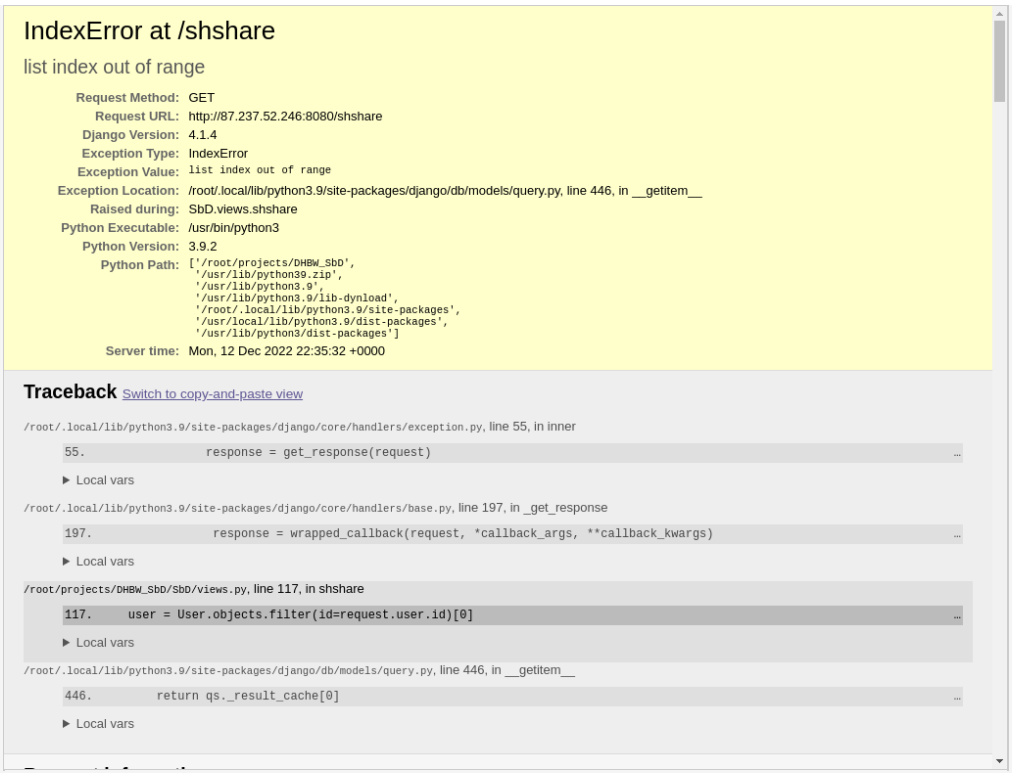

Figure 2. Internal Error

Login Interface Found CONFIRMED

URL	Evidence
http://87.237.52.246:8080/login	<input id="username" name="username" placeholder="Geben Sie Ihren Benutzername ein" required="" type="text"/> <input id="password" name="password" placeholder="Geben Sie Ihr Passwort ein" required="" type="password"/> <button type="submit">Login </button>
http://87.237.52.246:8080/register	<input id="username" name="username" placeholder="Geben Sie Ihren Benutzername ein" required="" type="text"/> <input id="password" name="password" placeholder="Geben Sie Ihr Passwort ein" required="" type="password"/> <button type="submit">Registrieren </button>

Details

Risk description:
An attacker could use this interface to mount brute force attacks against known passwords and usernames combinations leaked throughout the web.

Recommendation:
Ensure each interface is not bypassable using common knowledge of the application or leaked credentials using occasional password audits.

Security.txt file is missing CONFIRMED

URL
Missing: http://87.237.52.246:8080/.well-known/security.txt

Details

Risk description:
We have detected that the server is missing the security.txt file. There is no particular risk in not creating a valid Security.txt file for your server. However, this file is important because it offers a designated channel for reporting vulnerabilities and security issues.

Recommendation:
We recommend you to implement the security.txt file according to the standard, in order to allow researchers or users report any security issues they find, improving the defensive mechanisms of your server.
